

D-Fixings are pan head fire-rated screws, with close threads for high performance. D-Fixings are ideal for securing D-Line Safe-D cable supports, and other electrical installation equipment. D-Fixings can be used in masonry, drywall, concrete, and wood.

D-Fixings have been extensively tested, and can secure cable loads up to 1780°F for 2 hours, while withstanding stress vibrations and water sprays also.

In fire tests the D-Fixing screw threads remain securely embedded with no need for anchors or plastic wall plugs (which typically melt at 320°F).

- 1780°F melting point
- Requires 0.125" pilot hole in harder substrates
- No need for plastic wall anchors
- Excellent tensile strength, shear strength and pull-out load performance
- Supplied in boxed quantity of 100 pcs

Material	Steel, non-corrosive
Screwdriver type	PZ3
Usage	Masonry, drywall, concrete, and wood
Pilot hole required	0.125"
Temperature rating	1780°F
Head diameter	0.42"
Shaft length	1.37"
Shaft width	0.21" thread
