CABLE MANAGEMENT THAT MAKES CLEANING EASIER

Perhaps this is unsurprising because when cables are behind TV's or desks; loose around floor edges; or lying on benches, they can seem impossible to clean around?

But don't worry, one of germs' most popular hangouts is easy to sort – by using D-Line's family of cable organisers.

Produced in UK, D-Line's patented trunkings are very easy-to-use, and can blend with decor so the cables seem to disappear!

 $\frac{1}{2}$ round lengths simply peel & stick, and are ideal for hiding cables above skirting boards and from wall-mount TV's. $\frac{1}{4}$ round options are floor trims, that hide cables. Being non-metallic, D-Line lengths can be cut if required, with corner bends & connectors also available for a perfect finish.

No electrical competence is required, as cables simply rest in the D-Line lengths which have a click-lock lid; this can later be opened or closed to add or remove cables. D-Line trunkings are shaped for easy wiping too!

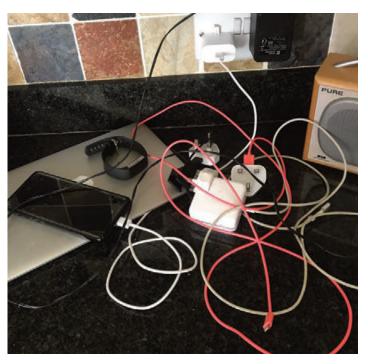

For socket blocks and cable spaghetti, use D-Line Cable Tidy Units. Having 3x cable entry/exit points at rear, the Cable Tidy Units are simple to use... the breeding ground, where all sorts used to cling, becomes reclaimed space - that is now easy to clean around!

IN CHARGE OF CABLES!

For all we love our gadgets, we have a list of complaints against the cables that charge them. A recent survey from D-Line, the cable management experts, ranks our top ten cable moans -

- 1. When someone has removed the charger cable
- 2. Being unable to clean around the cables (dust. crumbs...)
- 3. Not enough plug sockets for all our cables & devices
- 4. Look a complete mess
- 5. Expensive to replace
- Cables often too long, taking up floor/desk/bench space
- Cable insulation splits, & ends break, from regular usage
- 8. When knotted, takes time to unravel
- 9. Picking up after dropping behind a table
- Unwanted disconnections of other devices
 equipment e.g timers, TV's, freezers

D-Line Cable Tidy Units can sort common cable woes by providing a neat home for hiding power strips and cable clutter.

The stylish boxes are produced from robust ABS material, electrically safe and tested, with four click-lock points for secure lid attachment. Three rear cable entry and exit slots enable the cords to most easily reach out to their devices.

In pics from this example, the Cable Tidy Units are housing a power strip and plugs while keeping the charger cables handy and exactly where we want them. Space on the worktop can be used again, and the area is easier to clean. All is 'easy to use, & looks great!'

Top Tips

- 1. Check the size of your power strip & plugs so all can be accommodated in the Cable Tidy Units.
- 2. Allow the cables a bending radius, do not over-bend cables. If in doubt, consult a qualified electrician.
- 3. Plan your plug layout; put plugs for left or right-side devices, to the left or right-side.
- 4. Pre-wrap excess cords, for easier storage in the Cable Tidy Unit.

FOR HOME-WORKING & OFFICES, 'SEE CABLES, THINK D-LINE'...

Personal office setups, at home or company, typically depend on around twenty-foot of cables to power the equipment and devices we need to do our jobs.

Then we complain when cables go 'missing', look out-of-place or seem almost impossible to clean around. But it doesn't have to be that way, with friendly cable organisers readily available...

D-Line's made-in-UK 'easy-to-use, look great!' cable management products require no electrical competence, as most can be retro-fitted around existing cables.

Cable Tidy Units hide socket blocks and cable clutter. Popular on floors and desktops, cables go in or out via rear exits. The Units combine style, safety & robustness in a practical design. When in the Cable Tidy Unit, extension sockets and plugs become less accessible; wasted space is returned; cleaning is easier; and the cables remain where you need them to be and less likely to be 'borrowed!' by others.

D-Line **Cable Tube's** are flexible and pre-split to welcome cables dropping behind a desk. Users simply push in (or pull out) cables via the split-seam – different to expandable **Spiral Wraps** which can be wrapped around cable bundles up to 40mm diameter. D-Line **Cable Zipper** works best for encapsulating several cables that are over two metres long.

For underside a desktop or up a desk leg, D-Line **CableTraC's** are peel & stick lengths with a pliable top section that allows cables to enter or exit at any point. The modern $\frac{1}{2}$ -round shape is gentle on impact, easy to clean, and non-metallic so lengths are easy to cut if needed.

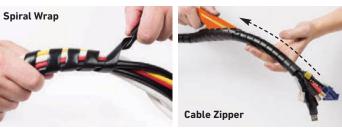

Around the desk, Cable Tidy **Clips**, and **Bases**, are peel & stick solutions for keeping cables where you want - so eliminating wasted time. And hook & loop **Band** is ideal for sorting loose cables, keeping them close, while being reusable and multi-purpose!

Wherever we work, be it at home or an office, with a D-Line solution for every scenario, cable management has never been easier...

Keep cables where you want!... Bases; Clips; Band

FLOOR TRIM THAT HIDES CABLES!

Some floors have carpets, while others are covered by laminate or ceramics. In common, all make it difficult to hide cables.

When cables come along they'll usually be left to lie around, looking awkward and exposed, longing for the type of attention that the safe haven of a D-Line cable path can offer...

Around a floor perimeter, D-Line's patented ¼-round-lengths make a neat trim that doubles as a cable path.

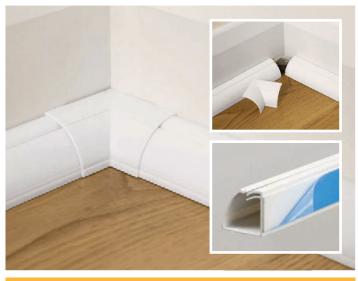

Unlike other floor edgings, there is no need to measure layouts precisely; because D-Line accessory bends can simply clip over corners in ways that cover any gaps or oblique cuts.

Professional installers, familiar with traditional solid floor edgings, respect how in comparison the D-Line Floor Trim typically takes only half the installation time.

The non-metallic lengths can be cut if required, to accept a cable inlet/outlet accessory that might be located near to a floor-standing light, speaker or I.T equipment.

Once installed, the hinged lid can be pulled down ready to accept cables. After inserting the cables, the lid can be snapped shut, before attaching any corner bends or end-caps that might be required.

Being easy to add or remove cables later, the cable path is always ready and able to make cables seemingly disappear!

Note - Cable Inlet/Outlets

The Cable Inlet/Outlet accessory (aka Cable Entry/Exit) can

be cut at top or bottom, according to where the cable entry

or exit is required.

MAKE YOUR GYM FIT FOR CABLES

Setting up for home fitness, perhaps by converting the garage or turning the utility room to a personal gym, conjures images of a treadmill, cross-trainer, exercise bike and whatever else being too close for comfort. Perhaps with a weights bench in close proximity?

Instead of attaining fitness, with cables strewn across the floor to their nearest sockets, the best of intentions can be spoiled by cable hazards. And with equipment usually crammed in a tight space, the risk of serious injury is so much greater.

It means before treating yourself also to that special accessory, be it a punchbag, or mirror wall, scales or even a shower cubicle, you'd be wise to think first about cable management.

D-Line Floor Cable Protectors are supplied (boxed or bagged) in a roll that uncoils to lay flat & cover cables, so reducing the risk of trips or falls. The pre-split rear reveals a cavity that fits over the cables, with ribs on the underside that minimise movement.

The top has tapered sides that are friendly to foot traffic.

The D-Line range is available as 1.8m or 9m lengths. And being a flexible material means lengths can easily be cut for perfect sizing.

Top Tip

Select Floor Cable Protector having a cable-cavity size

that can accommodate the cables to be hidden.

Beware alternatives can be too flimsy, or too stiff so they cannot lie flat... these types can be worse trip hazards than the actual cables!

Another piece of equipment most home gyms will be better for is a wall-mounted TV, helping to keep focus and make those difficult time sacrifices more bearable!

To save channeling walls to hide cables, D-Line Trunking offers a Cable Hider solution that can simply peel and stick.

D-Line's ½-round lengths have a hinged & click-lock lid that makes it easy to later add or remove cables, with the stylish design giving a perfect finish for the set-up of your new fitness room.

KEEPING WIRES SAFE FROM PETS IS SIMPLE AS A, B, C... D-LINE

Pet owners can make their homes (& pets!) safer, without compromising on aesthetics, by easy-to-use products which keep wires and cables away from animals.

D-Line's cable management range allows home owners to hide cabling and wiring, in ways that stop pets from being able to chew on the wires.

As Louise Scott from D-Line explained, "One of the problems that animal lovers have to contend with is making the house safe for their pets, very much the same as parents do with small children."

Cats, dogs, even house rabbits and smaller animals might love having freedom of the home, but it can be tempting for playful and curious pets to chew through cables left uncovered. However a shock of 240 volts can kill, while split cable insulation can cause electrocutions, and broken cableconductor strands create hot-spots which can make cables a fire hazard...but any cable risks can be easily sorted!

"Before D-Line, there were few options, short of knocking a hole in the wall to hide the wires, or using a blocky strips of sharp edge trunking which isn't aesthetically pleasing." D-Line provide stylish and subtle containment solutions, including self-adhesive ½-round trunkings that can blend above skirting or attractively cover cables dropping vertically from a wall mounted TV.

Alternative ¼-round trunkings provide cable paths at floor level, and popular Cable Tidy Units contain socket extensions and cable clutter. Spiral Wrap and Cable Tubes are examples of other D-Line solutions for concealing wires that, to a pet, might seem inviting to nibble or bite!

Louise said: "D-Line solutions combine practicality, safety and style so the cables seem to disappear in products that are designed for modern interiors. They are made in UK, and easy to use by requiring no electrical competence as most simply retro-fit around existing cables. And being inexpensive means there's only ever a small price to pay for our peace-of-mind"

CABLE MANAGEMENT FOR TV WALL-MOUNTS

Routing cables behind a wall can be an awkward job, with the added hassle if you later need to add or remove a cable, perhaps for a digibox or gaming set-up. **But with D-Line's modern & no fuss Cable Hiders, TV cables can be out of sight but still remain accessible!**

D-Line lengths are non-metallic so can easily be cut as required, according to viewing height preferences also. Note - a trend towards bigger screens is making shorter lengths most popular, especially when the cables are dropping behind furniture.

Stylish $\frac{1}{2}$ -round designs are available in different colours to match popular screen trims and can blend with décor. Alternatively, D-Line lengths can be painted. The $\frac{1}{2}$ -round shape make the profiles easy to clean too.

The adhesive backing on D-Line lengths then enables simple peel & stick installation, or they can be drilled.

D-Line's hinged and click lock lid ensures the cord hider is easy to open & close, keeping cables handy and making your set-up most versatile.

Top Tips

If necessary, D-Line can be cut shorter by using a junior hacksaw When selecting a D-Line profile, consider...

- The amount of cables (& the cable diameters) to be contained ref capacity required
- Width of TV screen. Even if only 2 or 3 cables, note TV's wider than 30" scale well with D-Line's 2"x1" / 50x25mm (width x height) profile.

If connecting TV cable to power sockets, aerial points or surround sound speakers, other D-Line lengths and accessories can enable a perfect finish

TRUNKINGS THAT STICK AROUND, FOR AS LONG AS YOU LIKE

So you've pencil marked the layout of exactly where you want your D-Line cable hider, cut the lengths to size with a fine saw-blade, and considered gaps for any corners or bend accessories to be inserted...

Now with the hinge at its base and click-lock at topside, one easy way to affix D-Line trunking is to gently peel the liner at one end from its backing tape, hold up the trunking length(s), and apply finger pressure to stick the first inches up to the pencil mark.

Then slowly move along the length(s); peeling, pressing and firmly sticking the D-Line trunkings as as you go. Finally insert the cables, and attach any accessories. Job done!

Assuming the surface was clean and level flat, not dusty and uneven or textured, then at normal room temperatures you'll have created a bond with your trunking that should last for years.

Alternatively, D-Line trunking can be drilled and screw-fixed, with the choice of fixing being dependent on the type of surface.

A plasterboard wall should use wall plugs, so the screw attaches through the trunking drill-hole into the wall plug. Screws (& wall plugs) in the trunking should be spaced no more than one metre apart.

PVC trunking mounted on brick or wood can be installed by drilling a pilot hole into the solid substrate, then tighten the screw through the base of the trunking length.

Thinking ahead, if you need to remove the raceway, drill holes can simply be filled with fillers or putty's then made smooth flush by using a knife and sandpaper! For various ways to eliminate any tape residue, see Top Tips below.

There is no right or wrong way, and really the question of whether to stick or drill trunking has ready made answers that shouldn't leave you stuck when deciding your best way!

Top Tips

- Do not apply tape to newly painted walls
 paint needs at least one week to have a firm grasp.
- Tapes can damage wallpaper, or leave residues.
 Warm soapy water is ideal for glass or marble surfaces.
- Adhesives left on wallpapers and paintwork can oftenmelt with hairdryer heat, and will lose adhesion when treat by nail varnish remover or alcohol spirits.
 - While no guarantees are offered, these options can make it easier to gently scrape and rub away tape residue.
- If screw-fixing for multiple lengths a cordless screwdriver can make the job easier!

DESIGNING THE PERFECT TRUNKING

Incredibly, to hide cables before 2006 there was two main choices only - either blocky strips of white plastic, rectangular/square, with a clip-on lid and sharp edge; or trying to put cables behind the wall or underfloor, often incurring hassle & redecorating.

D-Line was inspired by the want for a cable management solution that could be 'easy to use & look great!'

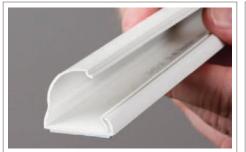

With an alternative being long overdue, in 2006 D-Line progressed to challenge every element of traditional trunking in pursuit of a new & modern way to hide cables.

Below were some of the design challenges & our answers...

The shapes. In one move, by rounding the design, our new profiles did not look like 'unfashionable' trunking!

With no sharp edges, D-Line's subtle appearance can uniquely blend with contemporary decor.

One piece. Having a hinge to join the base and lid means there is only one-piece to handle, saving installation time.

Then there is no risk of the lid detaching, saving maintenance time.

Click-lock lid. A trunking lid must lock effectively & securely, to contain the cables.

Still, it should be possible to later add or remove a cable(s)... the end-section of D-Line's lid is held by a special groove; if needed, this can be pushed up-and-over to access the cable compartment.

Non Metallic. Trunking lengths often need cutting to specific requirements. That's why we use quality uPVC that is rigid but lightweight and easy-to-cut.

To protect cables from impact, it is important the uPVC is at least a particular thickness. And we include UV-stabilizers so D-Line products will not discolour in sunlight.

Corner Bends. Adding accessories, such as bends & tees can be awkward.

It doesn't matter however if a D-Line length is cut oblique, or a gap is visible from an imperfect measure, because D-Line's clipping over-the-top method of installing corner bends & tees means the cut is never exposed.

Easy-to-install. Peel and stick tapes enable quick & easy installation, but D-Line lengths can be drilled and screw-fixed also.

Perfect condition. We want your D-Line to arrive in perfect condition, no dust or scratches, so we apply removable film cover to protect lengths.

Paintable. We offer different colours which often saves need for paint, but we appreciate how decor changes. No worries D-Line can be painted! - best to firstly key the surface.

Range. With trunkings, one size never fits all! So we've many profiles, in a variety of colors, and wide ranges of accessories to enable a perfect finish.

Recyclable. Once D-Line's tape is removed, the uPVC can be recycled and ground for example in to a micronised form before use in other forms.
